Netter's Anatomy Coloring Book: With Student Consult Access, 1e (Netter Basic Science)

Synopsis

Now you can learn and master anatomy with ease, while having fun, through the unique approach of Netter's Anatomy Coloring Book, by John T. Hansen, PhD. Using this interactive coloring workbook, you can trace arteries, veins, and nerves through their courses and bifurcations...reinforce your understanding of muscle origins and insertions from multiple views and dissection layers...and develop a better understanding of the integration of individual organs in the workings of each body system throughout the human form. Online access to Student Consult where you'll find the complete contents of the book and much more further enhances your study and exponentially boosts your reference power. Whether you are taking an anatomy course or just curious about how the body works, let the art of Netter guide you! Provides multiple views, magnifications, and dissection layers that strengthen your understanding of 3-D anatomical relationships. Presents each topic in two-page spreads with Netter anatomical illustrations accompanied by high-yield information that gives context to the structures. Features illustrations small enough for quick coloring, but large enough to provide you with important details. Offers tips for coloring key structures that emphasize how a coloring exercise can reinforce learning. Uses Key Points to cover functional and clinical relevance and relationships. Contains tables that review muscle attachments, innervation, action, and blood supply. Features Clinical Notes which highlight the importance of anatomy in medicine. Includes online access to Student Consult where you can search the complete contents of the book, print additional copies of the coloring pages, view completed coloring pages for reference, access Integration Links to bonus content in other Student Consult titles...and much more...to further enhance your study and exponentially boost your reference power.

Book Information

Series: Netter Basic Science

Paperback: 368 pages

Publisher: Saunders; 1 Workbook edition (February 6, 2009)

Language: English

ISBN-10: 1416047026

ISBN-13: 978-1416047025

Product Dimensions: 10.9 x 8.5 x 0.9 inches

Shipping Weight: 2.2 pounds

Average Customer Review: 4.6 out of 5 stars See all reviews (66 customer reviews)

Customer Reviews

I am entering medical school this fall, and through a complicated admissions maneuver, I ended up not having to take anatomy as a prerequisite, while most of my other classmates did. Rather than take an online anatomy class, I decided to teach myself as best I could so that I wouldn't be completely lost in class. I asked a professor at the medical school for guidance in getting caught up to my classmates with about 7 weeks of summer left before class starts, and this is the book he recommended. No textbooks, no classes, just do this coloring book. He said that I would not be terribly far behind if I finished this book. I would learn the rest in medical school. Granted, this is not the best way to prep, but this was his advice for my exceptionally short time period to prepare. I've now made it about halfway into Section 3 (the Muscular System), and here are my impressions so far. The book is adapted from Netter's Atlas of Human Anatomy -- in fact, the pictures themselves are de-colored copies of selected drawings from that book. The pictures chosen are meant to be a highlighted tour of the more comprehensive Atlas, and I think it works okay in that regard. You don't get bogged down by pictures of detailed, minor structures from a hundred different points of view. Each plate of drawings has a corresponding page of explanatory notes and tables, which are sub-par. The main problem with the explanatory pages is that if this is your first time looking at this material, and you have no other reference books to turn to, the explanations are sometimes incomplete and unclear. For example, in Plate 3-6, discussing Intrinsic Muscles of the Pharynx and Phonation, there is a table listing the cuneiform cartilage with a short description about its location and function.
